Buffalo Backflow Inc.

Featuring GaugeZone™ Division

Model BBI-TK9S

SPECIFICATIONS:

Maximum working pressure: 175 psi

Maximum working temperature: 210°F

Gauge: 4 1/2" diameter face dual scale 0 - 15 psid
and 0-1 kg/cm², ±2% accuracy full scale

In Line Pressure Gauge: 0 – 200 PSI

Test Valves: (2) ball valves and (1) needle valve

Hoses: (3) 3' with female threaded swivel couplings

1 – High Performance Elastic “Bungee” Chord

Case with tool tray and compartment for fittings

Adaptors: (3) 1/8" NPT X 1/4" Flare

(3) 1/4" NPT X 1/4" Flare

(3) 1/2" x 1/4" Bushings

(3) 3/4" x 1/4" Bushings

1 - Moisture resistant instruction guide

Case: light weight, shock resistant molded
plastic with foam inserts

Let our Recalibration Re-call help you stay up to date

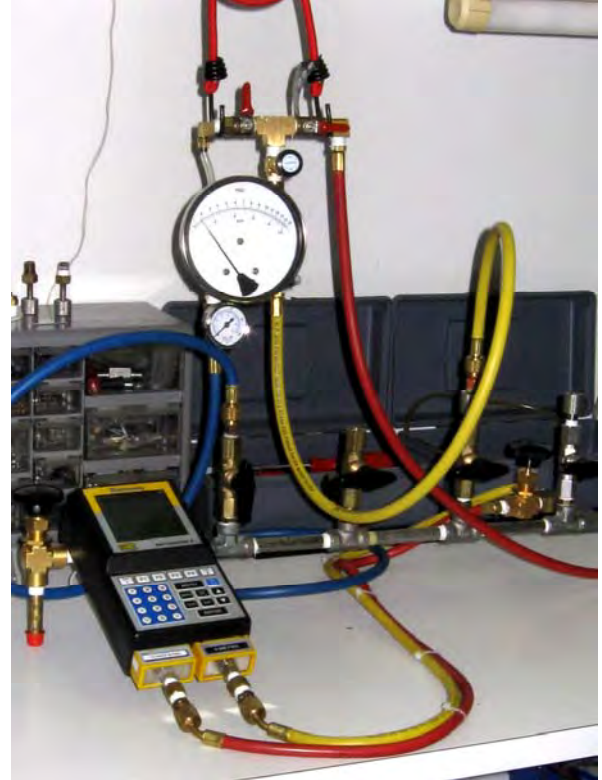

Most regulations specify that a backflow preventer test kit must be calibrated and certified at least once per year. All BBI-TK9S backflow test kits are entered into a recalibration re-call program, that automatically sends you a reminder 60 days before your calibration is due. This gives you plenty of time to return your kit to your distributor for recertification, keeping it in compliance.
